Automation in Python by Sohan

Nowadays, due to Covid as schools and offices are closed, the online classes and online meetings are mostly attended from the zoom app. I also attend my daily online classes from my laptop on this zoom app. Every time I want to join a class, I need to open whatsapp and enter the meeting ID and password again and again. That's why I have created this zoom app automation in python. You just have to enter timings, meeting ID and passcode only ONCE. And just run the program. And you are DONE! The timings you have entered at that time, zoom app will automatically open up automatically, cursor will automatically click on buttons and automatically meeting ID and passcode will be entered and automatically at the given times you will join your online class or meetings on time. Now you will never be late !!
